Flutter Homework

Assignment: Your task is to take the provided UI design and recreate it **literally** in your local development environment. I want to see this running on your Android Emulator, iOS Simulator, or Chrome browser!

Objective

To master the art of layout composition using the **Widget Tree**. You must translate the visual elements from the image into clean, functional Flutter code.

Submission Requirements:

- **The Layout:** Use a Column as your main axis and Rows for the statistics and buttons.

- **The Profile:** Use a CircleAvatar for the image (you can use a network image from Unsplash).

- **The Buttons:** Implement a "Follow" button using ElevatedButton and a "Message" button using OutlinedButton.

- **Styling:** Pay close attention to **Padding** and **Spacing**. Your app should look as close to the reference image as possible.

Pro-Tips for Success:

- **Icons:** Use Icons.person_add for the Follow button and Icons.chat_bubble_outline for Message.

- **Fonts:** Experiment with FontWeight.bold for the name and the stat numbers to make them pop.

- **Theming:** Try to match the deep blue color used in the AppBar and the Follow button.
