L3 NIT

Homework:

WIRELESS NETWORK INDOOR

DATE:15/01/2026

1. Explain what an indoor wireless network is and give one example of where it is used in a school.
2. Describe the main devices needed to set up an indoor wireless network.
3. Explain how wireless signals are transmitted inside a building.
4. Discuss factors that can affect the performance of an indoor wireless network, such as walls or distance.
5. Mention two advantages of using a wireless network instead of a wired network indoors.
