

Basic Of Networking

A university has three campuses: one in Kigali, one in Huye, and another in Musanze. Each campus has its own LAN connecting computers, printers, servers, and other devices. The university wants to connect all three campuses so that users can access shared services.

Question:

- a) What type of network is used within each campus?
- b) What type of network is required to connect the three campuses?
- c) Explain why each network type is appropriate.
